

RESIDENTIAL WATER BLADDERS

NEW RTPU WATER BLADDERS! Made from Polyurethane. Not made from PVC.

Liquid Containment water storage bladders / bladder tanks are a revolutionary new way of collecting and storing storm water directly from your roof. Ideally suited for any confined space where water can be stored, like under house, under decks, units, sheds, stair wells, pool sheds and much more. Hidden away where no one can see them.

Made from new RTPU material with a strong non tear reinforced inner cloth our water bladder tanks need no frame work as they are self supported. Unlike many other brands of bladder tanks on the market who use thin, non reinforced PVC that will leave your water tasting and smelling bad.

Our bladder tanks are ideal for watering the garden, washing the car or dog, irrigation purposes, filling the pool and spa or connecting to your house to provide water too toilets, washing machines and hot water systems.

Bladder Tanks can also be banked up together side by side or end by end for greater water storage and can be easily removed and taken to a new location should you decide to move house.

All tanks are manufactured with 1 x 50mm threaded fitting, 1 x 32mm outlet. The 50mm inlet can be replaced with a 100mm PVC collar pan on request. All bladders also have a 19mm barbed air vent.

All Bladders and Pillow Tanks are made to order and current dispatch times on tanks are 7 business days from the time of order unless otherwise requested.

If you would like to speak with someone about your water storage call Paul on 0405 138 664

Features:

- Algae resistant
- Environmentally friendly TPU material
- No PVC taste or smell in water
- Suitable for storing water for drinking, irrigation or pool filling
- Guaranteed not to leak and not to rust
- Pressure tested
- Manufactured from high quality PE
- 10 year material and 12 months workmanship warranty
- Non-elastic walled
- No glues or residues
- Self supporting so no need for a frame
- UV stabilised
- 100% Australian Made

You may also find our bladder tank capacity to be less than other brands on the market. This is due to the fact we provide you with accurate volumes based on the recommended fill heights and the natural pillow shape of bladder tanks. Other brands represent their products based on a square shape which can be misleading and false.
